Providing a range of information on polymers and polymerization techniques, this text covers the gamut of polymer science from synthesis, structure and properties to function and applications. It analyzes speciality polymers, including acrylics, fluoropolymers, polysilanes, polyphosphazenes, and inorganic and conducting polymers. The book examines the stereochemistry of polymerization and the stereoregularity of polymers.

This book is a guide to biomedical visualization in microscopy, a new method of computer-aided three-dimensional imaging. Aspects of computer graphics, image analysis, specimen preparation, and microscopy technology are combined in this multiauthored work to provide thorough coverage of the most important biomedical applications of visualization. Examples include three-dimensional imaging of serial mechanical sections in light and electron microscopy as well as non-invasive sections in microtomography and confocal microscopy. Special emphasis is placed on advanced 3-D imaging with laser scanning microscopes. An exciting new technique presented here is four-dimensional visualization: the time- resolved imaging of in-vivo microstructures. Serving as an excellent introductory text and reference source for microscopists, computer scientists, and researchers in biology and clinical medicine, this book also contains over 150 illustrations, many in color, as well as a fold-out poster of a computer-generated image of cell mitosis.

This volume is the first practical guide for developing productivity measurement systems. It describes the use of the Productivity Measurement and Enhancement System (ProMES), designed by its author and his colleagues.

The increasing interest in queueing networks with blocking is mainly due to the fact that these models arise naturally in computer systems, communication systems and production systems. This volume, the result of the first international workshop on queueing networks with blocking, presents research consisting of theoretical developments and practical applications. Scientists and practitioners in the areas of computer science, industrial engineering, operations research and management science can benefit from the material collected here.
